

Indian Harmonium
for NI Kontakt, HALion, EXS24 & SoundFont

The Indian Harmonium is an essential part of Indian music and could be described as a hybrid of an accordion and a pump organ. The characteristic sound could be heard in most Indian folk music and in contemporary music influenced by the “sound of India”.

The SampleSet contains 228 stereo 24bit wav files.

8 programs for all versions of Steinberg HALion

5 programs for Logic EXS24

7 programs for NI Kontakt v1 and v2

1 program for NI Kontakt v3 and v4

7 programs in the SoundFont format (*16bit*)

The SoundFont versions are 100% compatible with all virtual samplers supporting the SoundFont format.

The HALion, EXS24 & Kontakt programs have separated key sounds for the attack and release samples incorporated in the programs, while the SoundFont version has these samples in separated programs.

Two programs with bordunes, sound effects and pump sounds add to the realism and makes the complete “Indian Harmonium” SampleSet from Precisionsound a must if you want the sound of an Indian Harmonium in your “ready to play” palette of sounds.

Indian Harmonium for NI Kontakt 3 and 4

This updated, additional file in NI Kontakt 3 and 4 format requires the full version of NI Kontakt 3 or 4 and does not work fully with the free Kontakt player!

Articulation:

Pulldown menu with the available articulations, the name of the selected articulation is visible. Articulations can also be selected by keyswitch. Solo 1 = C1 Tremolo 2 = C#1 Bordunes = D1 FX = D#1

Velocity:

The amount of velocity sensitivity from 0 to 100%. This does not affect the volume of keynoises, which is adjustable with the next knob.

Keynoise:

Controls the volume of the keynoises.

Release:

Controls the volume of the release samples.

EQ:

Hi and Lo volume +/- control knobs.

Saturate:

Saturation FX with intensity control knob. When the knob is fully to the left, the effect is bypassed.

Chorus:

Chorus FX with volume control knob. When the knob is fully to the left, the effect is bypassed.

Reverb:

Convolution reverb FX with 3 IR presets "Small", "Medium" and "Large" and volume control knob. When the knob is fully to the left, the effect is bypassed.
